EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Cynthia K. Nicholson on April 13, 2005.

The application has been amended as follows:

In claim 5, lines 6-11, amend these lines to read as follows:

- -

respiration frequency band; and

the signal selecting means selects weight signals, the signal strengths of which have a predetermined ratio to the signal strengths in the frequency band lower than the respiration frequency band.

- -.

In claim 15, lines 7-9, amend these lines to read as follows:

- -

in frequency of the respiratory signal,

wherein the determination means detects apnea or hypopnea when the frequency of the respiratory signal varies from low to high when a period of the respiratory signal becomes 0.5 second shorter than the previous signal.

- -.

In claim 29, lines 4-9, amend these lines to read as follows:

- -

band; and

the signal selecting means selects weight signals, the signal strengths of which have a predetermined ratio to the signal strengths in the frequency band higher than the respiration frequency band.

- -

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

As to independent claim 3, the prior art of record does not teach the respiratory monitoring system as claimed including: a signal strength determining means that determines a signal strength in a respiration band corresponding to the respiratory body movement and and a signal strength in another frequency band; a signal strength comparing means that compares the signal strength in the respiration frequency band with the signal strength in the other frequency band; and a signal selecting means that selects weight signals having a signal strength in the respiratory frequency band with a predetermined ratio to the signal strength in the other frequency band.

As to independent claims 12 and 15, the prior art of record does not teach the respiratory monitoring system as claimed including: the determination means detects apnea or hypopnea when: the amplitude of the respiratory signal decrease, increase, and then decrease with time and a frequency of the respiratory signal increases as the

amplitude of the respiratory signal increases; or the frequency of the respiratory signal varies from low to high when a period of the respiratory signal becomes 0.5 second shorter than the previous signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
